

Sightlines LLC
FY11 Facilities MB&A Presentation
Saint Louis University

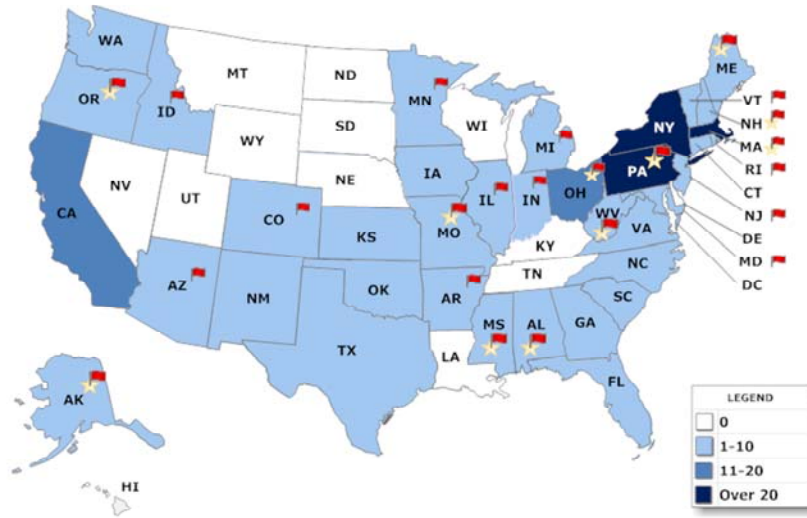

November 2nd, 2011
Presented by: Peter Reeves and Amy Siedlecki

Sightlines

- The University of Maine
- University of Maine at Augusta
- University of Maine at Farmington
- University of Maine at Machias
- University of Maine at Presque Isle
- University of Maine at Fort Kent
- University of Maryland
- University of Massachusetts Amherst
- University of Massachusetts Boston
- University of Massachusetts Dartmouth
- University of Massachusetts Lowell
- University of Michigan
- University of Minnesota
- University of Missouri
- University of Missouri - Kansas City
- University of Missouri - St. Louis
- University of New Hampshire
- University of New Haven
- University of Notre Dame
- University of Oregon
- University of Pennsylvania
- University of Portland
- University of Redlands
- The University of Rhode Island, Narragansett Bay
- The University of Rhode Island, Feinstein Providence
- The University of Rhode Island, Kingston
- University of Rochester
- University of San Diego
- University of San Francisco
- University of St. Thomas (TX)
- University of Southern Maine
- University of Toledo
- University of Vermont
- Upper Iowa University
- Utica College
- Vassar College
- Virginia Commonwealth University
- Virginia Department of General Services
- Wagner College
- Wellesley College
- Wesleyan University
- West Chester University of Pennsylvania
- West Virginia University
- Western Oregon University
- Whiston College (MA)

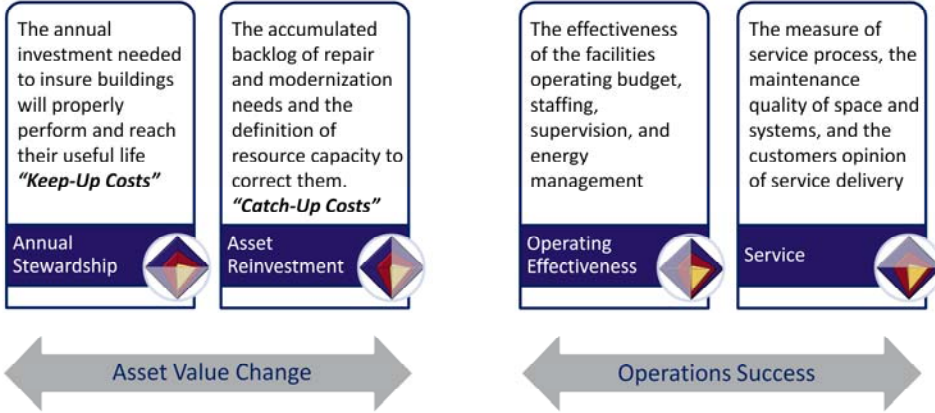

Sightlines profile

- 10 year old company based in Guilford, CT
- Common vocabulary and consistent methodology
- 95% Annual retention rate
- Tracking \$5.9 billion in operations budgets and \$4.2 billion in capital projects
- Database of 23,500 buildings and 825 million GSF

A vocabulary for measurement

Shifting Age Profile

- Enrollment growth has outpaced space growth, increasing density
- Substantial portions of SLU's campus are moving into more costly age categories.

Limited Historical Investment

- Investment levels are significantly below peers and annual investment levels
- The backlog of needs on campus has been steadily increasing, while peers have managed a decrease

Strong Operation, Sustainable?

- SLU's operating budget is well below peers, with limited growth in the past 5 years.
- Despite the lower resources, Operations performance is at or above peer levels in Maintenance, custodial, and grounds.
- There exist some early warning signs as to the impact on effectiveness of the limited investment

Peer Institutions

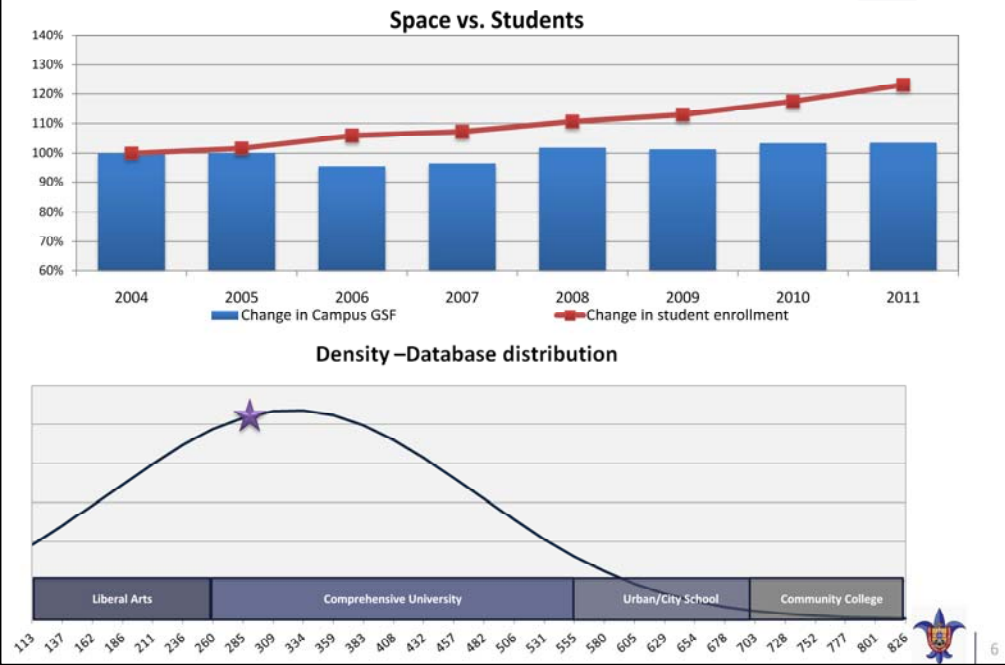

Institution
Boston College
Brown University
Clemson University
Duke University
Northwestern University
The University of Chicago
Thomas Jefferson University
University of Missouri – Columbia
University of Notre Dame
University of Pennsylvania

We use a number of factors to determine a peer group such as location, program, enrollment and various facility profile metrics. Among the facility profile metrics, we focus on Tech Rating and Density factor. Tech Rating determines the technical complexity of the systems within a building and Density Factor is Campus Users (in FTEs)/100,000 GSF.

Student Growth outpacing space growth

Although low, density has been increasing

Student Enrollment has outpaced the growth in space over the last 8 years. This means campus density has increased. The database distribution shows, that while density has increased, it is still relatively low compared to our database. It does however fall well within the range we see for comprehensive Universities.

It is important to understand the age profile of campus when thinking about facility investments. The important dividing line is over/under 25 years old. Space Under 25 requires Stewardship (“Keep – up”) investment, while space over 25 requires Reinvestment (“catch-up”) investments. SLU’s campus profile is more heavily weighted to the Reinvestment group, with approximately 70% of space over 25 (and an even greater % of the medical campus falls into that category).

Campus GSF by age category

68% of SLU's space is over 25 years old

Sightlines

Compared to peer institutions, SLU has an older campus profile. Particularly in the Over 50 category. These are the facilities that require significant investments in the coming years and also increase strain on maintenance operations.

Understanding the life-cycle costs of buildings

Planning for need on campus through life cycle modeling

Sightlines

Understanding the life cycle needs of your buildings also help with understanding upcoming or deferred capital needs. Using a typical life cycle chart, one can see that SLU’s campus can be broken roughly into four categories based on where they fall on the life cycle curve.

Capital Investments

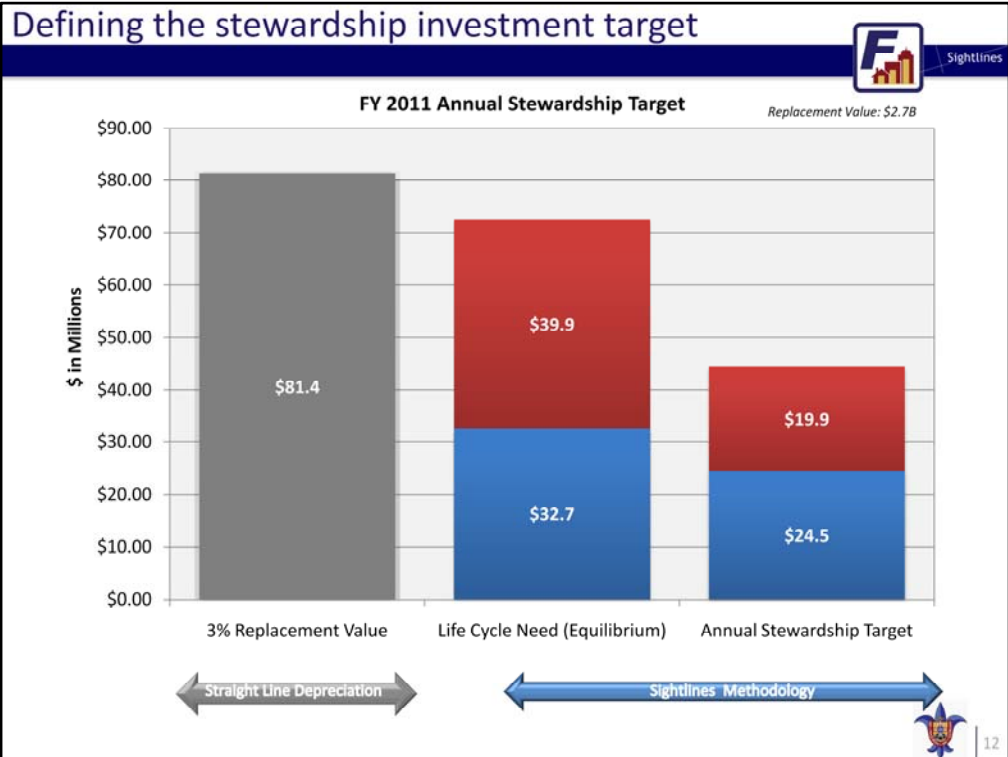

Peer investment has exceeded SLU every year

SLU would have to spend an additional \$30 million a year to reach peer levels

Capital Investment levels at SLU remain significantly below peer institutions. Both sources of funding are below peers Annual Stewardship – Purple & Asset Reinvestment – Green). While peers have been able to address deferred maintenance and perform major renovations through significant investments, SLU has not.

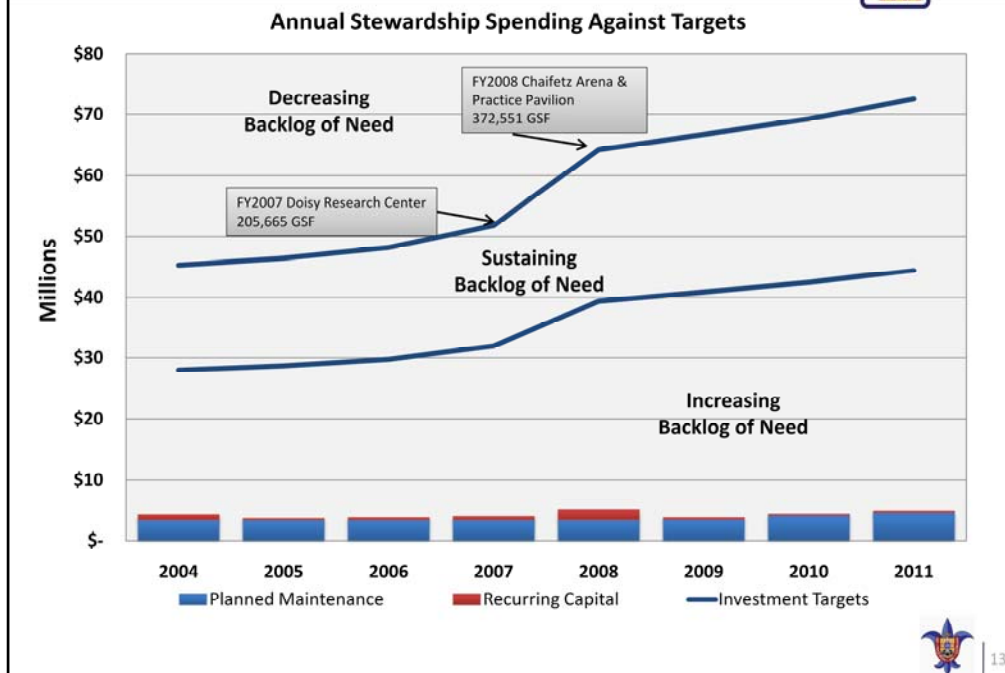

How much does an institution need to invest on an annual basis?

3% Of replacement value – Reference point. Based on Straight line depreciation of assets.

Life Cycle Need – Sightlines Generated number based on Age, Function, and Technical Complexity. What would it cost to replace every building component at the end of its useful life. Red – Space and Programming, Blue – Envelope and Mechanical.

Annual Stewardship Target – Discounts the Life Cycle Need for the coordination of Renovations and Modernizations, as well as the extensions of building life cycles through proper upkeep.

Limited annual investment increases the backlog of need

The lines represent the two Sightlines generated targets. They grow over time due to the addition of space and construction cost inflation. When Measuring the Recurring funding against this target, SLU has funded approximately 5 million each year, and has increasingly fallen short of the investment target. By not reaching the investment targets, projects are added to the backlog of need (deferred maintenance).

SLU has no substantial recurring capital source

This shows the percent of the Annual Stewardship funded by peers and SLU over time. Overall funding levels are significantly below peers by approximately \$10 million annually. The main difference is the availability of recurring capital dollars. Peers are significantly funded with recurring capital (i.e. maintenance Reserve, R&R funds, Maintenance & Repair funds, etc.), while SLU's primary source is from the operating budget planned maintenance.

If you are unable to reach the target investment level with Annual Stewardship, many institutions make up the difference with Asset Reinvestment. SLU has been unable to do this in any year of our analysis. This means that the backlog of need has been growing in every year.

Peers investment exceeding their annual targets

Peers on the other hand have reached and exceeded their target investment level. This means that peer institutions have been reducing their backlog of need.

SLU's NAV decreasing, while peers are increasing

Net Asset Value measures the “percent good” of a building. A rising NAV means that you are reducing backlog, while a falling NAV represents a growing backlog. Peers have been growing their NAV (reducing backlog) and SLU has been decreasing their NAV (Increasing backlog). Despite the trends, NAV is similar to peers in FY11.

Strategies for managing the backlog growth

Formulating an index based on needs and replacement value of buildings

This is a sample slide. It shows that you can take different approaches to different buildings based on age and conditions. Focus on keep-up the young buildings that are in good condition(High NAV), while you want to Renovate or transition old buildings in poor condition(low NAV).

Operating Effectiveness

SLU has had little/no growth in operating budget since 2008

On average, peers are budgeted \$2.60/GSF higher than SLU

Facilities Operating budget against peers. SLU is spending over \$2/gsf less than peers. Driven in large part due to the low utility costs. But Daily Service costs also remain below peers, meaning SLU is running a efficient operations.

Comparing Budget to actual for facility expenses (Contracts and materials) can be a good early warning sign as to limited capital investment catching up with a campus.

Similar resources, similar performance

Important factor to consider on this chart is both the high tech rating and the limited capital investment. Both these factors are increasing the strain on maintenance staff. Given those factors, similar performance with similar resources is a good news story.

Work orders per trades FTE

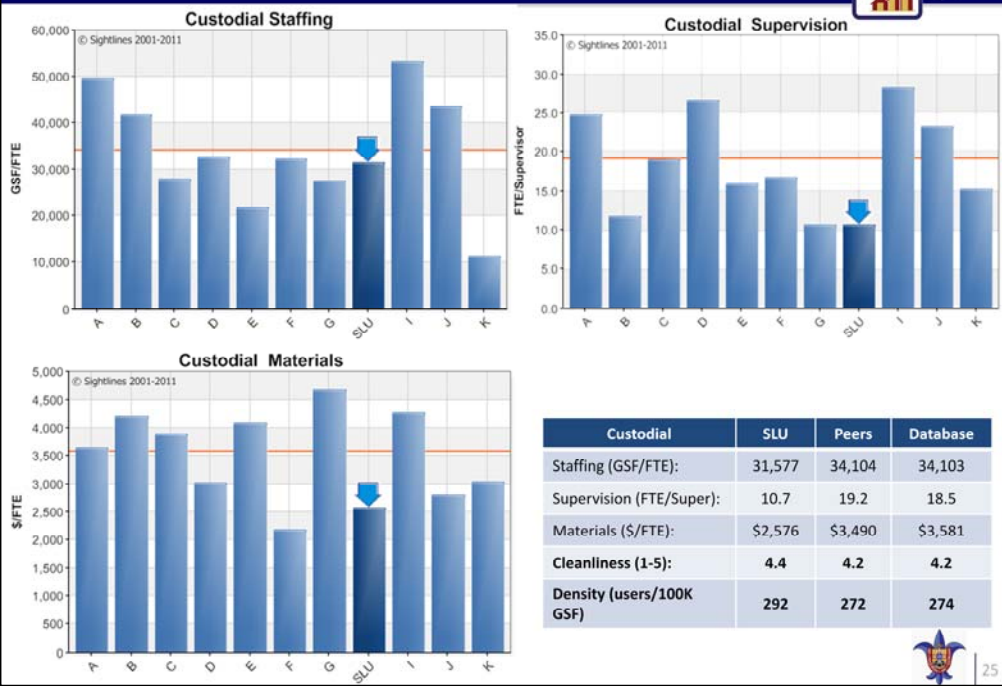

Looking at work order trends can be another tool to find early warning signs of under investments. If corrective maintenance work orders are taking more time, the # of work orders per FTE will also decrease. This can be indicative of problems becoming more severe.

Planned Maintenance is the primary source of stewardship

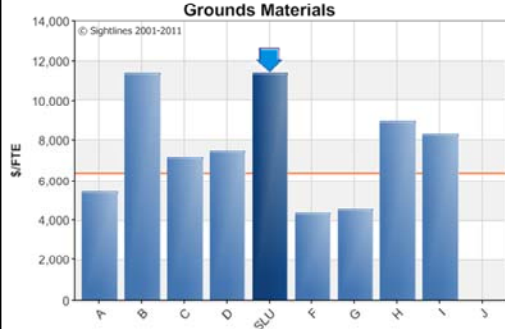

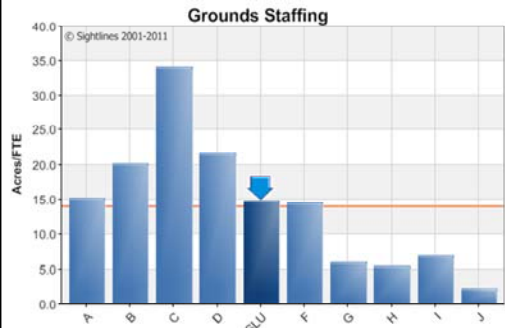

PM has been increasing, but it is still below peer levels. Since this is the only source of annual stewardship, it is crucial to maintain and grow this investment if possible.

High campus cleanliness with slightly more resources

Despite having slightly more resources, the cleanliness inspection score is higher than peers. This is a value proposition, is slightly more investment into staff and supervision worth a higher cleanliness score?

Notably high grounds inspection scores

Grounds	SLU	Peers	Database
Staffing (Acres/FTE):	14.8	14.01	14.09
Supervision (FTE/Super):	9.5	12.9	10.8
Materials (\$/FTE):	\$11,397	\$6,411	\$6,910
Grounds (1-5):	4.3	4.0	4.1
Grounds Intensity:	.60	.95	.91

SLU's grounds department is performing at a high level with similar staffing and supervision as peers, and more investment into materials.

Energy Consumption

Maintaining low total consumption

SLU 's consumption is commendable particularly with a higher tech rating

Energy Peers: Brown University, Kutztown University, Missouri University of Science and Technology, Oregon State University, Portland State University, The Johns Hopkins University, Thomas Jefferson University, University of Missouri – Columbia, University of Missouri – St. Louis, University of Missouri – Kansas City, University of Rhode Island, Wesleyan University, and West Chester University of Pennsylvania

28

Tech Rating is one of the biggest factors in energy consumption. To have a high tech rating like SLU and still manage to keep consumption low is commendable.

Electrical Cost below peers

Costs are below peers, but electricity unit cost increased in 2011

Energy Peers: Brown University, Kutztown University, Missouri University of Science and Technology, Oregon State University, Portland State University, The Johns Hopkins University, Thomas Jefferson University, University of Missouri – Columbia, University of Missouri – St. Louis, University of Missouri – Kansas City, University of Rhode Island, Wesleyan University, and West Chester University of Pennsylvania

29

Regional costs, particularly for electricity are very low.

Medical campus drives overall energy profile

Medical campus increases overall energy consumption

When looking at consumption just for the Frost campus, it is significantly below peers.

The medical campus consumption is closer to peers in fossil and above peers in electric. The Medical campus probably has the best prospects for energy reduction.

Possible improvements to the service process

Changes to get to a 5

New work order system should help in implementing some of these changes, which will contribute greatly to improving the service process.

Efficiencies & Effectiveness

- Discover campus hotspots
- Integrate capital selection
- Provide leadership with hard data
- Fix instead of band aid

Standards & Processes

- Standard submittal process
- Automated PM Schedule
- Customer Service Process
- Home base for Operators

Facilities Fast Facts

- What's broken
- Trouble buildings
- How often it breaks
- Who fixed it

Facilities MB&A

Evolving Campus:

- Different segments of SLU campus have very different needs. Each of these segments require a unique approach to capital and operations.

Capital Investments:

- A successful capital approach will utilize stewardship investment in younger space, while focusing Asset Reinvestment in Older spaces.
- Understanding the backlog of need on campus will help with project selection and improving the overall quality of space.

Operating Effectiveness:

- Operations have been performing at a very high level, but there exist some possible early warning signs that question the sustainability of this performance.
- Any energy savings will most likely be found on the medical campus and can be used to supplement operational and capital shortfalls.

Questions and Discussion
